Reviewer's report

Title: Risk factors for operated carpal tunnel syndrome A multicenter population-based case-control study

Version: 2 Date: 22 April 2009

Reviewer: Andrew CF Hui

Reviewer's report:

1) Under study limitations in the discussion section, the small sample size is commented on and that (stylistic point)

2) An alternative could be found for "being tall" - could we replace that with "height" and qualifying by saying that "taller individuals are less likely to suffer from CTS" etc.
