Reviewer's report

Title: Dietary habits in three Central and Eastern European countries: the HAPIEE study

Version: 1 Date: 18 August 2009

Reviewer: Cecile Knai

Reviewer's report:

Minor essential revisions:
This was a very useful paper nevertheless it would benefit from a slightly broader explanation of the factors leading up to the current situation (health/diet-wise). Moreover it would be useful to frame this information in terms of public health issues. What is the impact of the dietary habits reported here? How do these results align themselves with other reports/data? What actions can policy makers take to respond to such results?

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.

Declaration of competing interests:
