Reviewer’s report

**Title:** Non drowsy obstructive sleep apnea as a potential cause of resistant hypertension: a case report.

**Version:** 1  **Date:** 12 February 2012

**Reviewer:** Marcel Baltzan

**Reviewer’s report:**

This is an interesting case which is of instructional value in clinical medicine. A woman with obesity, snoring, refractory hypertension and hypertensive heart disease is found to have sleep apnea. Coincident with initiation of CPAP, her clinical state improves as well as her hypertension.

**Major Compulsory Revisions**

There are no major revisions given that the patient is adequately described, the health-care context is known, and the outcome is clear.

**Minor Essential Revisions**

Several clinical descriptors are missing and are points clinical interest such a case. These include the history of fatigue and non-restorative sleep, the neck circumference and the intra-oral examination.

**Discretionary Revisions**

The grammar and sentence structure belies writing by an author whose does not usually write in English. this should be edited prior to publication.

**Level of interest:** An article of importance in its field

**Quality of written English:** Not suitable for publication unless extensively edited

**Statistical review:** No, the manuscript does not need to be seen by a statistician.

**Declaration of competing interests:**

I have no conflicts of interest to declare.
