Reviewer's report

Title: Unilateral phrenic nerve lesion in Lyme neuroborreliosis

Version: 2 Date: 20 December 2012

Reviewer: Tim Counihan

Reviewer's report:

The authors have answered most of the points raised in my initial review. There remain several issues of debate (the neuropathy of Lyme is not a true vasculitic neuropathy) but the case report is a useful reminder for clinicians of the treatable nature of this condition.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
