Reviewer’s report

Title: Treatment with Tolvaptan: a rapid and efficient hyponatremia management in patients with SIADH and small cell lung cancer

Version: 2 Date: 8 April 2013

Reviewer: Jaishree Bhosle

Reviewer’s report:

This revised version of the manuscript has been improved by the changes made as is now suitable for publication. It is now written as a case series rather than a study. The English still needs some further work to make the manuscript clear to the reader.

Minor revisions:

1. Page 13 'median 17,5 days' should read 17.5 days I think
2. Page 14 'The treatment with tolvaptan was accompanied by an amelioration of the clinical status and enabled the patients for the treatment of the underlying SCLC disease'. This is an example of poor English and may read better if changed to 'enabled the patients to commence chemotherapy for SCLC'.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
