Reviewer’s report

Title: The relationship between physical functional capacity and lung function in obese children and adolescents

Version: 3 Date: 26 September 2014

Reviewer: Neeti Pathare

Reviewer’s report:

After reviewing the edits submitted by the authors my comments are below:

Data in tables and figures should not be replicated.

If adding all the data is necessary in the results and discussion section consider identifying primary and secondary findings. This will make the data presented less confusing and will help highlight the principal aim of the study.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.

Declaration of competing interests:
