Reviewer's report

Title: Use of interrupter technique in assessment of bronchial responsiveness in normal subjects.

Version: 2 Date: 25 October 2004

Reviewer: Nicole Beydon

Reviewer's report:

General
The authors managed to give satisfactory answers to the comments. The paper is now clear and better written

-----------------------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

-----------------------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

-----------------------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

-----------------------------------------------------------------------------------------------

What next?: Accept without revision

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No
