Reviewer's report

Title: T-cell-based diagnosis of tuberculosis infection in children in Lithuania: a country of high incidence despite high bacille Calmette-Guerin vaccination coverage

Version: 3 Date: 30 March 2009

Reviewer: Claudio Fortis

Reviewer's report:

Minor Revision:
In figure 2 what box-and-whisker plot indicate: median, 25th and 75th quartile? This should be reported in figure legends.

Also in legend of figure 3 should be reported what data means.
However for figure 3, because only 8 subjects were followed up 8 weeks, should be better to report the date of every single subject (using different symbols)

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, and I have assessed the statistics in my report.
