Reviewer's report

Title: Bone mass in schizophrenia and normal populations across different decades of life

Version: 3 Date: 2 October 2008

Reviewer: Chittaranjan Andrade

Reviewer's report:

1. The authors have not provided a point-wise response to the reviewers' comments. As a result, it is hard to identify how they have addressed the reviewers' concerns.

2. From a comparison with my original comments and the revision submitted, it appears that a substantial number of comments remain unaddressed.

3. The writing style remains inadequate for a journal submission.

Level of interest: An article of importance in its field

Quality of written English: Not suitable for publication unless extensively edited

Statistical review: Yes, and I have assessed the statistics in my report.

Declaration of competing interests:

No change as of earlier
