Reviewer's report

Title: The relationship between spasticity in young children (18 months of age) with cerebral palsy and their gross motor function development

Version: 3 Date: 11 August 2009

Reviewer: mintaze kerem gunel

Reviewer's report:

All my recommendations are considered in revised manuscript form.

The research has been studied longitudinal design about the relationship between spasticity and the development of motor function in CP.

The revised manuscript gives good overview on the impact of spasticity on development of gross motor function, contractures and deformities in children with CP.

I think the authors have improved the manuscript and I am now pleased to recommend publication.

Thank you very much for authors’ effort to consider their paper.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the
statistics.

Declaration of competing interests:
I declare that I have no competing interests.

Sincerely
Mintaze Kerem Gunel
