Reviewer's report

Title: Are classifications of proximal radius fractures reproducible?

Version: 1 Date: 11 May 2009

Reviewer: A. Alex Jahangir

Reviewer's report:

This paper is an interesting well designed study which meets the points that are asked by the journal. My only suggestions are discretionary revisions as follows:

In the methods section (4th paragraph) the manner in which the methods were described could be better written to explain that the reviewers had to classify each xray with the 3 classification system upon each assessment session. The way it is currently written, this is not very clear.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
