Reviewer's report

**Title:** Alterations in Osteoclast Function and Phenotype Induced by Different Inhibitors of Bone Resorption - Implications for Osteoclast Quality

**Version:** 3  **Date:** 16 February 2010

**Reviewer:** Rachel r Davey

**Reviewer's report:**

The authors have addressed all comments and criticisms satisfactorily.

With regards to point number 6, the request to include P values was referring to text of the results section, not the individual graphs. The reviewer agrees that asterisks are sufficient to indicate significance on all figures, however is also of the opinion that P values (ie. P<0.05) should be stated within the text of the results section for those parameters that are significant.

**Level of interest:** An article of importance in its field

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.

**Declaration of competing interests:**
