Reviewer's report

Title: 3066 consecutive Gamma Nails. 12 years experience at a single centre.

Version: 2 Date: 5 February 2010

Reviewer: Martyn Parker

Reviewer's report:

This is an interesting study that I do feel is appropriate for publication. It details the treatment of a large series of patients from a single centre responsible for the development of this implant. It provides some useful information into their results for treatment and associated complications. The potential conflict of interest is appropriately mentioned along with the merits and faults of this study. I therefore feel it is appropriate for publication as it stands.

One small mistake is I think the term 31A in table 3 should be 32A

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
