Reviewer's report

Title: How reliable is MRI for diagnosis of cartilage lesions in patients with lateral patella dislocation?

Version: 1 Date: 9 May 2010

Reviewer: Caroline Hing

Reviewer's report:

This is a well written and designed study.
The authors do need to provide the following information:

Were the MRI scans anonymised?
What was the time frame for the intra-observer study and was it performed on all scans?
Were the MRI reporters also the arthroscopists? If so again were the patient details anonymised?

Level of interest: An article of limited interest

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
