Reviewer’s report

Title: Reverse LISS plating for intertrochanteric Hip Fractures in elderly patients

Version: 2 Date: 20 October 2009

Reviewer: A. Alex Jahangir

Reviewer’s report:

I appreciate the authors amending their submission to address some of our concerns. My concern still is as follows: The authors state that they had only 2 patients that had crews back out and teh rest of teh patients did nothave this problem, however the figures provided demonstrate the example of where the screws backed out. I do not think this paper should be published until we see examples of cases that healed and did not have screw backout. Once we see these figures of good cases, then I believe this paper should be published

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
