Reviewer's report

Title: A Treatment Applying a Biomechanical Device to the Feet of Patients with Knee OA Results in Reduced Pain and Improved Function. A Prospective Controlled Study

Version: 2 Date: 12 March 2010

Reviewer: Cindy Veenhof

Reviewer's report:

The authors answered my questions well and I have the opinion that the manuscript can be accepted.

The only comment I still have is that I almost can not believe that the control group did not improve during the study (which they normally do when they perform exercise therapy such as walking).

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:

I declare that I have no competing interests
