Reviewer's report

Title: Screening of protein kinase inhibitors identifies PKC inhibitors as inhibitors of osteoclastic acid secretion and bone resorption

Version: 2 Date: 1 June 2010

Reviewer: Jean-Pierre David

Reviewer's report:

I do not think that the authors have answered to my main of comments.

1-the choice of 50 microM is as artificial than 10 microM dose, each compound has its own IC50 that should be used as reference.

2-There is still no evidence that the inhibitors working or ineeficient have been inhibiting any of their potential targeted kinases and I do beleive that it is a major draw back.

Level of interest: An article of limited interest

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
