Reviewer's report

**Title:** Factors influencing inpatient rehabilitation length of stay following revision hip replacements: A retrospective study

**Version:** 2 **Date:** 1 September 2010

**Reviewer:** Henrik Husted

**Reviewer's report:**

The authors have done a good job in revising the manuscript. They can of course not change the set-up according to my previous comments on LOS and discharge criteria.

As the inpatient rehab is not standard in many countries - and the reader may speculate on the excessive LOS reported here - it may be beneficial to stress that the study is not in hospital but in a rehab facility outside hospital.

Otherwise, I have no further comments.

**Level of interest:** An article of limited interest

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.
