Reviewer's report

Title: Computer work and musculoskeletal disorders of the neck and upper extremity: A systematic review

Version: 2 Date: 22 December 2009

Reviewer: Xing Zhao

Reviewer's report:

This review examines the evidence for an association between computer work and neck and upper extremity. The topic is novel and meaningful since there are more and more disorders emerging in clinical work because of lots of computer application nowadays.

Major Compulsory Revisions:
1. The keywords for literature search have not been modified, so they are still not complete for this study.
2. In discussion part, the limitation of this study should be discussed well.

Minor Essential Revisions:
The authors still need to check the English spelling carefully, since there are still some minor faults.

Discretionary Revisions:
None.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
