Reviewer’s report

Title: The interest of gait markers in the identification of subgroups among fibromyalgia patients

Version: 3 Date: 26 August 2011

Reviewer: Virginia Aparicio

Reviewer’s report:

Due to the fact that I still not having answer to my comments, I prefer that the editor takes the final decision.

Despite I’m aware that gait is affected by obesity, I would like to know more clearly the reasons why obese FM patients were excluded from the study sample when more than the 50% of the FM patients are obese and thus the sample could be not representative.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
