Reviewer's report

Title: Low bone mineral density a significant risk factor for low-energy distal radius fractures in middle-aged and elderly men: A case-control study

Version: 2 Date: 11 February 2011

Reviewer: Isam Atroshi

Reviewer's report:

The authors have clarified most of the issues raised in the review. The description of the regression analysis performed is still not entirely clear. It seems that the regression analysis was a simple two-variable analysis done separately for each variable without including/adjusting for any other variable. It is important to describe this analysis very clearly. There are still a few minor grammatical errors to be corrected.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
