Reviewer’s report

Title: Upper limb position control in fibromyalgia

Version: 3 Date: 14 September 2012

Reviewer: Kerstin Wentz

Reviewer’s report:

Minor revisions: The manuscript has improved considerably and my own remaining objection is that the exhibited an alteration in neuromuscular strategy for upper limb position control is not also discussed in terms of mechanisms of the brain. The brain has been focused upon regarding fibromyalgia not the least in the area of central sensitization but also cognitive difficulties.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
