Reviewer's report

Title: Analysis of Orthopedic Surgery of Bone Metastases in Breast Cancer Patients

Version: 5 Date: 25 September 2012

Reviewer: Andreas Leithner

Reviewer's report:

The authors have further improved their manuscript. However, I still have the impression of a difference in the conclusions between the abstract (R0 margins are predictors of prolonged survival) and the manuscript (where the margins lost the significance in the multivariate analysis) - nevertheless the paper is worth publishing.

Some mistakes are still found in the manuscript - e.g. in the discussion section "Attempatients"?

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
