Reviewer’s report

Title: Impregnation of bone chips with alendronate and cefazolin, combined with demineralized bone matrix: a bone chamber study in goats.

Version: 2 Date: 19 February 2012

Reviewer: Magnus Tägil

Reviewer’s report:

I am happy with all changes and feel the authors have really done a god and extensive work to meet my previous concerns. I am not happy with their added power analysis. As it is now I think it is wrong. The authors write they set alfa and beta to 10% which in my eyes mean they powered the study at p<0.10 which is odd.

Else everything is satisfactory

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
