Reviewer's report

Title: Prophylactic Antibiotic Regimens In Tumor Surgery (PARITY) Survey

Version: 3 Date: 6 February 2012

Reviewer: Toshihiro Akisue

Reviewer's report:

The revised version of this manuscript has been improved compared to the old version. The authors have responded the comments from the reviewers and I think that the responses and changes are reasonable. However, I found some topographical problems. After the minor revision, I think that current manuscript could be published in BMC Musculoskeletal Disorders.

Specific comments:
1. Page 3, abstract
   “one in four” and “One in three surgeons” should be noted in specific values (percentage), namely “25%” and “33%”.

2. Page 13, line 1
   I think that the authors noted 5 key findings following this sentence.

3. Tables
   Each table should be noted in the separate page.

4. Appendixes
   Appendixes are informative to know the PARITY questionnaire. However, for the publication, the authors should make these appendixes more concise for the article.

Level of interest: An article of outstanding merit and interest in its field

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.

Declaration of competing interests:

I declare that I have no competing interests.
