Reviewer's report

Title: Do patients care about higher flexion in total knee arthroplasty? A randomized, controlled, double-blinded trial.

Version: 2 Date: 7 March 2013

Reviewer: Gautam Chakrabarty

Reviewer's report:

Very good topic. Good approach. The only 1 year follow up lets it down. The authors need to have a higher followup. The results at 1 year can be very different from slightly or significant. This long term wear is not included. and that may influence the outcome.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
