Reviewer’s report

Title: At the moment of occurrence of a fragility hip fracture, men have higher mechanical properties values in comparison with women

Version: 2 Date: 18 June 2013

Reviewer: Danijela Djonic

Reviewer’s report:

Although the authors did not accept the major suggestion to do rearrangement of cases they wrote explanation in the form of limitation. Since the comparison between of age subgroups is just one part of the study, I agree that is acceptably for publishing. The rest of suggestions they included in the paper.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
