Title: Guidance strategies for a participatory ergonomic intervention to increase the use of ergonomic measures of workers in construction companies: a study design of a randomised trial

Version: 3 Date: 24 March 2014

Reviewer: Diane Gyi

Reviewer's report:

Minor Essential Revisions

I am generally very happy with the revised manuscript. The authors have addressed my comments clearly and thoroughly. Just one small point of clarity:

I still find the Abstract a bit confusing - I am not sure what the the 'N=6' is referring to - I propose removing them from here (unless I am missing something). I also propose using the following sentence:

'.......to establish the effects of a PE intervention either guided by four face-to-face contacts or guided by 13 email contacts. The primary and secondary outcomes will be measured at baseline and after six months.'

One small typo:
Section 3.1, start of second paragraph, it should read 'meet' NOT 'met'

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:

No.
