Reviewer's report

Title: Cross-cultural adaptation and reliability and validity of the Dutch Patient-Rated Tennis Elbow Evaluation (PRTEE-D).

Version: 2  
Date: 11 July 2014

Reviewer: Joy MacDermid

Reviewer's report:

The comments and concerns of the reviewers have been well addressed. The authors have followed appropriate cross cultural translation processes and provided a useful translation of a PRO that is used in clinical practice and research. It makes a valuable contribution to the literature as cross cultural translation is important for more uniform assessment of patient conditions and contributes to our understanding of the performance characteristics of the tool in different contexts.

I have no further suggestions for improvement.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.

Declaration of competing interests:

I am the developer of the PRTEE and as such have more intimate knowledge of its use in supporting literature; and also an interest in seeing cross-cultural translations performed. I developed the tool for open access use so have no financial or personal gain through its use.
