Reviewer’s report

Title: Mortality and Complications of Hip Fracture in Young Adults: A Nationwide Population-based Cohort Study

Version: 3 Date: 13 October 2014

Reviewer: Jacqueline Center

Reviewer’s report:

This is a much better paper with the revisions. I only have a few comments that should be addressed.

Essential revisions
CCI shouldn’t be used as an abbreviation in the abstract unless it has been explained what the letters stand for.
Table 1 – I did not see the p-values for differences between cervical and trochanteric fractures as stated in the covering letter.
In the diagram, why is the hemiarthroplasty curve smooth and the internal fixation curve stepped when many more people underwent internal fixation than arthroplasty?

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
