Reviewer's report

Title: Analysis of association of MEF2C, SOST and JAG1 genes with bone mineral density in Mexican-Mestizo postmenopausal women.

Version: 2 Date: 22 September 2014

Reviewer: RIM SASSI

Reviewer's report:

Minor Essential Revisions:

1- The full name of the genes studied should be indicated in the introduction.

2- In table 4, the p value of the rs 2235811 should be more investigated. In fact this p value is reaching the significance.

3- You should explain the fact that the SOST genotypes were associated with FN not with LS. This can be explicated by the high heritability of FN or measurement error.

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
