Level of interest: A paper whose findings are important to those with closely related research interests

Advice on publication: Accept after revision, which I do not need to see

This short paper deals with a case report of an open antero-lateral dislocation of the elbow of a female dancer. The paper is clear and concise.
In the abstract and the case presentation I missed that more explictely is stated that there was no repair of the muscular and ligamentous attachments.
In the abstract"( last line) I did not understand "closed reduction"

The paper is important for those with closely related interest.

Accept this paper after revision, which I do not need to see.

Acceptable english.

I have no competing interest in relation to this paper
