Reviewer's report

Title: Scoliosis Treatment Using a Combination of Manipulative and Rehabilitative Therapy: A Retrospective Case Series

Version: 2 Date: 16 August 2004

Reviewer: Paul Iaizzo

Reviewer's report:

General

-------------------------------------------------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

-------------------------------------------------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

The Authors have addressed most of the requested suggestions. Lines should be added to the first image set in Figure 5 and uniform colors should be used. It would still be helpful to have more prior treatment information added for these subjects in Table 1. I would still suggest pairing down the reference list to include only the most pertinent citations.

-------------------------------------------------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept after minor essential revisions

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No
