Reviewer's report

Title: Reliability of upright posture measurements in primary school children

Version: 4 Date: 20 January 2005

Reviewer: Daniel Chow

Reviewer's report:

General

-------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

-------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

The manuscript has been much improved. As the repeatability test was conducted with the markers remained in place for two measurements, the repeatability of marker placement (i.e. remove and attach the markers again) was not quantified. It would be useful to indicate this limitation in the discussion.

-------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept after minor essential revisions

Level of interest: An article of limited interest

Quality of written English: Acceptable

Statistical review: Yes
