Reviewer's report

Title: Knee movement patterns of injured and uninjured adolescent basketball players when landing from a jump: A case-control study

Version: 2 Date: 26 September 2005

Reviewer: Nicola Maffulli

Reviewer's report:

My main criticisms lie in the fact that a relatively small number of subjects were studied, and that it is not made clear that this is an association, not a causation study. The Discussion should be altered to reflect this, and should be tightened up: I find it too verbose of at least 30%.
