Reviewer's report

Title: The three-dimensional microanatomy of the chondro-osseous junctional region of the normal human knee joint.

Version: 2 Date: 26 April 2006

Reviewer: Thomas M Quinn

Reviewer's report:

General

-----------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

-----------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

Since the study is primarily observational and relates to a specific new feature, the title should be much more specific. I would suggest the authors choose the major finding and make that into the title. Something like "Protrusions of uncalcified cartilage directly contact subchondral bone and marrow spaces in the normal adult human chondroosseous junction"?

-----------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept after minor essential revisions

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No
