Reviewer’s report

Title: Systemic zoledronate treatment both prevents resorption of allograft bone and increases the retention of new formed bone during revascularization and remodelling. A bone chamber study in rats.

Version: 2 Date: 3 July 2006

Reviewer: Brigitte von Rechenberg

Reviewer’s report:

General
The article can now be accepted with the revisions. I can accept that the authors deal with the frozen allografts as necrotic bone, although I don’t necessarily agree. But until proven that there are subtle differences, this view can be accepted.

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept without revision

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No
