Reviewer's report

Title: The effect of high tibial osteotomy on the results of total knee arthroplasty. A matched case-control study.

Version: 2 Date: 5 July 2007

Reviewer: Nicola Maffulli

Reviewer's report:

General

The authors have satisfactorily answered the queries of the reviewers. Language editing still necessary (for example, 'fixated' should be 'internally fixed')

----------------------------------------------------------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

----------------------------------------------------------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

----------------------------------------------------------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept after minor essential revisions

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
