Reviewer's report

Title: Improvements In Survival Of The Uncemented Nottingham Total Shoulder Prosthesis: A Prospective Comparative Study

Version: 1 Date: 13 May 2007

Reviewer: George Kontakis

Reviewer's report:

General
This is a well written original article. The authors studied the survivorship of the re-designed Nottingham shoulder prosthesis. In my opinion they have added significant new information.

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept without revision

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
