Reviewer's report

Title: Physical inactivity is associated with chronic musculoskeletal complaints 11 years later: Results from the Nord-Trondelag Health Study

Version: 2 Date: 19 September 2008

Reviewer: Karin I Proper

Reviewer's report:

I have read the revised manuscript and would like to say that the authors have adequately revised it. Therefore, in my opinion, this version is acceptable for publication. In fact, it is an interesting paper that describes the (few, but important) shortcomings of the study very well.
