Reviewer’s report

Title: The assessment of Osteoporosis risk factors in Iranian women compared with Indian women

Version: 5 Date: 7 January 2008

Reviewer: elisabeth sornay-rendu

Reviewer’s report:

The manuscript has been improved. However, it would be necessary to limit the number of tables that is very too high. On the other hand, nutritional variables are probably very correlated between them, and could be grouped into categories such as intake of protein, calcium...What do the author means by "Adjusted for age and other relevance". It is not clear.

What next?: Accept after minor essential revisions

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
