Title: The effect of forearm posture on wrist flexion in computer workers with chronic upper limb pain

Version: 1 Date: 27 December 2007

Reviewer: ROBERTA BONFIGLIOLI

Reviewer’s report:

Minors Essential Revisions

Abstract (Results): add a preposition in the dominant wrist of all forearm postures.

Background: Authors should add as an objective of the study: to determine if wrist postures (flexion angle) can be affected by chronic forearm pain.

Discussion: Authors should add some limitations of this study:
- the sample size is small (especially for the CULP group)
- in the CULP group subjects without a muscle tendon disorders, but affected by peripheral neuropathy (i.e. CTS), could have been included

What next?: Accept after minor essential revisions

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
