Reviewer's report

Title: Functional outcome after Perineal Stapled Prolapse Resection (PSP) for External Rectal Prolapse

Version: 1 Date: 14 January 2010

Reviewer: Gaudenz Curti

Reviewer's report:

1. Minor essential revisions: Several spelling errors throughout the manuscript.

2. Discretionary Revision: The "recurrence rate" should probably be acknowledged with a bit more caution, since there are only 8 out of 31 patients at one year post op. There are still another 75% to come...

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.

Declaration of competing interests:
