Reviewer's report

Title: Bilio-Entero-Gastrostomy: prospective assessment of a modified biliary reconstruction with facilitated future endoscopic access.

Version: 3 Date: 18 April 2012

Reviewer: Aude Vanlander

Reviewer's report:

nice improvement of the article.
still too much pictures, fig 2b not necessary, and also the detailed images of the BEG. The big image is clear enough.

Is creation of a BEG type 3 nowadays in their center the standard of care in the surgical treatment of benign strictures of the CBD?
Is the message that it should be done standard care or in selected cases.

Table 5: the time is supposably in minutes (hours?)

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
