Reviewer's report

Title: Spontaneous complete migration of suture material after subcuticular continuous suture in cesarean delivery: A case report

Version: 2 Date: 5 September 2014

Reviewer: Rosalie M Grivell

Reviewer's report:

Major Compulsory Revisions
- none

Minor Essential Revisions
- it would be useful to know if there was record of any part of the suture being removed in the hospital - it would help the reader understand if this can happen as part of standard practice or whether this was perhaps a deviation from normal care? And a recommendation for practitioners might make this more relevant to practice? perhaps to secure the suture material at the edges of the wound or to check for completeness on removal,

Discretionary Revisions

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
