Reviewer's report

Title: Longitudinal Plication - A Surgical Strategy for Complete Rectal Prolapse Management

Version: 2
Date: 30 December 2013
Reviewer: Sabry A. Mahmoud

Reviewer's report:

1. Major compulsory revisions:
   - Data about continence and manometric studies should be mentioned
   - Results need revision and additional data about manometry, rectal compliance
     and capacity pre and post operative should be mentioned, also, results is too long
     and should be modified by removing all comparisons and adding it to discussion
     section.
2- minor essential revisions:
   - Abstract need spelling and structural revision
   - type of suture material and if interrupted or continuous and what is the benefit
     of removing mucosa.

Level of interest: An article whose findings are important to those with closely
related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
