Answers to reviewers’ comments

Reviewer 01 - Jeff Garner
Comment - My comments are relatively minor. The description of the case is much better. The discussion however still concentrates on Neurofibromatosis which I still feel is a peripheral issue to this case. The assertion that 'neurofibromatosis of the bladder . . . should be suspected in patients presenting with symptoms of obstructed defaecation even in the absence of urinary symptoms . . " is somewhat fanciful, given the unique nature of this case

Answer - This particular sentence was removed.

Reviewer 02 - Prakash Kurumboor
Comment 1 - Figure 2 and 6 may be omitted as it doesn't contribute much to the description of the case.

Answer - Fig 2 and 6 were removed and necessary changes were made in the manuscript and the English corrected.
