Title: Rhizotomy targeting the intermediate nerve, the glossopharyngeal nerve and the upper 1st to 2nd rootlets of the vagus nerve for the treatment of laryngeal neuralgia combined with intermediate nerve neuralgia—a case report

Version: 3 Date: 30 January 2014

Reviewer: Silvia Siqueira

Reviewer's report:

This is a well done description of a rare case of laryngeal neuralgia, diagnosed and treated with surgery. The surgical procedure was similar to glossopharyngeal neuralgia because of association between these types of neuralgia. I believe it is well written and should be published in BMC Surgery.

Level of interest: An article of importance in its field
