Title: Rhizotomy targeting the intermediate nerve, the glossopharyngeal nerve and the upper 1st to 2nd rootlets of the vagus nerve for the treatment of laryngeal neuralgia combined with intermediate nerve neuralgia-a case report

Version: 4 Date: 30 May 2014

Reviewer: Silvia Siqueira

Reviewer's report:

This is a well done description of a rare case of laryngeal neuralgia, diagnosed and treated with surgery. The surgical procedure was similar to glossopharyngeal neuralgia because of association between these types of neuralgia. I believe it is well written and should be published in BMC Surgery.

Level of interest: An article of importance in its field
