Reviewer's report

Title: Spontaneous intraperitoneal rupture of hepatic hydatid cyst: a rare cause of ascites

Version: 3 Date: 30 May 2014

Reviewer: Andreas Bakoyiannis

Reviewer's report:

Minor essential revisions

The authors managed well with almost all suggestions made in the previous review. There are still some minor language issues. Example from the discussion section: "They make result in a rapid and complete draining of the cyst in the peritoneal cavity. They can either evolve at low rate realizing a subacute form or in a rapid way realizing an acute form including abdominal pain, urticaria, anaphylaxis and sudden death [6, 7]."

This is a nice presented case report. It is a pity to keep returning back your manuscript for such minor errors.

Congratulations and keep up the good work.

Level of interest: An article of limited interest

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
